ELKA BUMP STOPS

SUPERIOR BOTTOMING CONTROL

Elka bump stops have been designed to deliver additional absorption, when the driving conditions and impacts exceed the shock absorber capacity. They prevent the vehicle to bottom out. Like all our products, the ELKA BUMP STOP is manufactured with high quality materials and components to ensure mechanical performance and superior aesthetics. The ELKA BUMP STOP is designed to fit existing aftermarket mounting cans to be welded or attached to the vehicle frame. Ideal for hardcore offroading, racing or overlanding.
